## Orion Voice AI Platform for Public Transportation

Push-to-Talk and Voice AI Bots for Transportation and Logistics to Optimize Driver, Dispatcher, and Fleet Operations

### PROBLEM:

Efficient and effective team communication is critical to safe and successful public transportation operations. Traditional radios are antiquated and overly complex, with inconsistent connectivity, poor audio quality, and a steep price tag. Standard phone calls (cellular or VoIP) are not secure, offer limited functionality, and are unable to scale across a dynamic frontline public transportation operation. Text messaging is dangerous and illegal to use while driving.

### SOLUTION:

The Orion Voice AI Platform for Public Transportation is a new and innovative approach to communication and frontline operations.

Rapid and easy deployment using modern cloud architecture.

Real-time communication, collaboration, and location management critical to Public Transportation.

Seamless transition from current technology.

Voice-activated process automation at the point of work. Orion's Voice AI Bots are unique and unavailable with traditional solutions.

# Quick-Start Bundle with Orion and GPS Lockbox

GPS LOCKBOX

Orion and GPSLockbox have made it easy to get started today in modernizing how “voice” can transform your frontline operations with the “Quick-Start Bundle”.

The power of Orion’s platform for Public Transportation has been optimally integrated with the purpose-built hardware from GPSLockbox. This combination creates a no-risk solution that includes real-time, push-to-talk communication, operations console for dispatch, powerful Voice AI capabilities for process automation, and all the necessary hardware and services. Contact us today to learn more!

## SOFTWARE

Push-to-Talk (PTT) Communication	Replaces the need for RTT/PRTT
Web-PTT/Dispatch	No local software needed Access with Chrome browser
Location Tracking	Real-time location visibility Insights for primary location information or back-up to CAD/AVL
Message Playback & Archive	Play missed messages Use archive for incidents & compliance
Orion Voice AI Bot: Radio Check	Process automation for vehicle operator check-ins
Orion Voice AI Bot: Translation	Process automation for speech-to-speech translation

## HARDWARE

Tablet & Data Connectivity	Included or bring your own
Cradle & Mounting	GPSLockbox (configured based on requirements)
Wired Microphone	Integrated with cradle (configured based on requirements)

## SERVICES

Hardware Installation	Turnkey installation of cradle mount including power
Software Deployment	Deployment & configuration including users/groups/settings
Training	Training on all relevant hardware and software elements

### About Orion

Orion is the leading voice-first, cloud-based Push-to-Talk 2.0 (PTT 2.0) intelligent unified communication platform. Orion’s patented Voice Bots and platform integrations deliver value-added services, automate routine processes, respond instantaneously in critical situations, and amplify team member knowledge. The platform improves frontline team productivity, safety and compliance, and customer and staff engagement.

Orion was recently named a Top 10 Intelligent Transport Systems Solution Provider for 2021 by Logistics and Transportation Review, a Top 10 Industrial IoT Solution Provider 2020 by Manufacturing Technology Insights, and an IDC Innovator. Orion holds 55 patents that support its award-winning solutions. For more information, contact us [www.orionlabs.io](http://www.orionlabs.io).
