

Any Network. Any Device. Any Infrastructure.

Deploy Orion's leading voice-first, intelligent collaboration platform using any method that best fits your business needs and requirements.

- Support unlimited users, groups, and locations
- Provide a multimodal user experience on one secure service, including voice, text, and visual media
- Integrate secure enterprise land mobile radio (LMR) communication between different users and Orion PTT groups

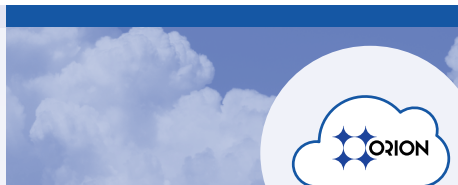

Unlimited users and groups

Data and retention policy control

Multimodal user experience

Orion Platform

The Orion Platform is the perfect deployment method for organizations looking to scale their collaboration solutions quickly and with minimal friction. Enjoy Orion's updates seamlessly on a secure platform, powered by Amazon Web Services (AWS) and trusted by leading organizations.

- Utilize a global, resilient, and highly-available service that's always ready for you
- Deploy globally and achieve scalability on Orion's powerful platform
- Configure user data archive and retention policies

Orion Private SaaS

Orion Private SaaS deployment empowers you to leverage a private cloud instance and run your own dedicated network, supported by Orion's leading engineers and product team. Your private enterprise deployment is a single-tenant solution, which allows for greater configuration, and can be deployed in different cloud environments, such as Microsoft Azure or Google Cloud Platform (GCP).

- Meet your logging, audit, and regulatory compliance requirements
- Maintain a private, dedicated environment, supported by Orion
- Customize user data retention and security policies

Orion On-Premise

Orion On-Premise deployment offers the same set of features as our cloud service, deployed behind your company firewall. It can be user-installed, configured, and deployed in an air-gapped network environment, disconnected from the internet, ready to meet federally regulated requirements.

- Utilize in highly secure environments, including a completely air-gapped or firewalled network environment
- Integrate secure enterprise VoIP communication between different users and Orion PTT groups
- Control your user data and retention policies fully

The Future of Voice at Work

Orion is the leading voice-first, intelligent platform that empowers deskless workers by enabling real-time team collaboration, process automation, location mapping, and access to enterprise systems to improve workforce productivity, safety and compliance, and customer engagement.

Orion holds 21 patents that support its award-winning solutions and has been named an IDC Innovator. The company is headquartered in San Francisco and backed by leading investors. For more information, visit www.orionlabs.io.
