Connect Your Deskless Workforce Like Never Before

Orion is the voice-first intelligent platform for heads-up, hands-free, and real-time communication and workflow automation using Zebra mobile devices. With Orion and Zebra, you can boost productivity, safety, compliance, and customer engagement with an all-in-one voice operations system and mobile productivity solution.

Heads-Up and Hands-Free Communication

Use voice-driven tools to collaborate and get work done safely, without having to look at screens, tap out emails, or hunt for information.

Frontline Collaboration & Location

Connect your people, assets, and data, and make better real-time decisions with voice-activated access to team locations, task status, sensor data, and enterprise systems.

Streamlined Mobile Efficiency

Eliminate the need to juggle multiple devices such as radios, smartphones, and desktops to access communications and business information.

Improved Productivity, Safety, and Compliance

Orion is a force-multiplier that speeds up processes, improves productivity, increases safety, and supports compliance by automating with checklists and standard operating procedures (SOPs) with Orion-powered voice-driven workflows. This helps keep deskless workers' heads and hands focused on the assignment.

Virtually Limitless Connectivity

With Orion, your teams can stay in sync, coordinate, and centralize visibility regardless of where they are, what device they use, and even what language they speak.
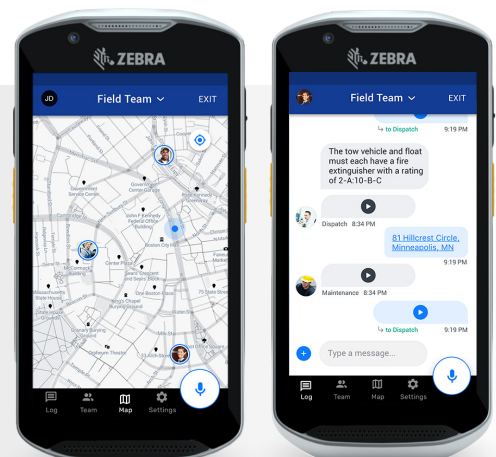

Context-Driven Data and Insights

Orion captures 100% of the metadata generated by communication streams (as configured to your organization's policy), providing the ability to analyze operations and improve decision-making.
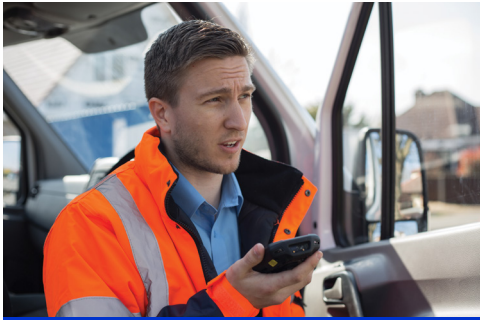

ZEBRA

Compatible with Zebra Mobile Devices

Orion supports a broad range of Android-enabled Zebra devices, including TC5x and TC2x series mobile computers. Orion software adds a voice-enabled interface to Zebra mobile devices and enables frontline workers to collaborate via voice, text, video, photos, and files. All of these options are available to users at all times, in one app, in one comprehensive user experience, and on one device.

Orion Leading Collaboration Functionality

Push-to-Talk (PTT)

- Individual, group, or all-call secure communication
- Mapping services to view real-time team member locations
- Secure voice, text, photos, videos, and files such as PDFs
- Extremely low-latency, high-quality audio PTT that works even on low-bandwidth connections
- End-to-end encryption (E2EE) for security across apps and devices
- Limitless scalability over any communications network, over any distance
- Collaborate with staff in any region using real-time language translation

Visualization Console

- Manage, dispatch, and supervise frontline teams and edge delivered work
- Coordinate and centralize operational visibility, management, and decision-making
- Communicate with distributed teams and handle dispatch via web-based PTT
- Create control at centralized, regionalized, and localized levels
- Achieve granular indoor and underground location visibility and mapping with advanced location services
- Access on-demand intelligence for situational management, safety, and compliance
- Record, play back, and archive all employee communications for compliance and reporting

Radio Interoperability

- Interoperate between radio users and Orion talk groups
- Use to ease the transition off legacy radios, or to maintain interoperability for those radios that need to remain in place
- Multi-modal device support and interoperability with LMR radios, VoIP, and SIP
- Available for stationary deployments or for mobile interoperability utilizing out-of-box LTE connectivity
